}

```

Reti di elaboratori

**enable routing RIP on R1**

```

router rip
version 2
network 10.0.0.0
network 192.168.122.0
default-information originate
!
ip forward-protocol nd
ip route 0.0.0.0 0.0.0.0 192.168.122.1
!
```

**ip default-gateway 192.168.122.1**

Fausto Marcantoni

Capitolo 4d – Instradamento e Algoritmi di instradamento

□3.23

23

Reti di elaboratori

**enable routing RIP on R1**

```

router rip
version 2
network 10.0.0.0
network 192.168.122.0
default-information originate
!
ip forward-protocol nd
ip route 0.0.0.0 0.0.0.0 192.168.122.1
!
```

Per propagare una default route, l'edge router deve essere configurato con:

- Una default static route utilizzando il comando `ip route 0.0.0.0 0.0.0.0 {ip-address | exit-intf}`
- Il comando `default-information originate` nella modalità di configurazione del router. Ciò indica all'edge router di essere la fonte delle informazioni sulla default route e di diffondere la default static route negli updates del routing

## Cisco Discovery Protocol (CDP)

Cisco Discovery Protocol (CDP) is a Link-Layer Cisco proprietary protocol that allows Cisco devices to communicate regardless of IP connectivity. It is used primarily to communicate protocol addresses and device capabilities. CDP sends frames that contain Type Length Values (TLVs), which are different properties of the port and/or connection.

**show cdp neighbors**
